American Board of Clinical Psychology
The Center for Men's Excellence

This presentation synthesizes research and theory regarding how men's socialization relates to their experience navigating the transition to new fatherhood. While the majority of parent educators and medical personnel see the fathers' role during the peripartum period as that of helper to the mother, a growing body of empirical evidence shows that fathers can make unique and long-lasting contributions to their child – and their partner's – well-being.
